

# Corona Virus Symptom Early Detection Breakthrough

Zero-contact thermal  
screening for red-zone/  
green-zone medical team  
communications

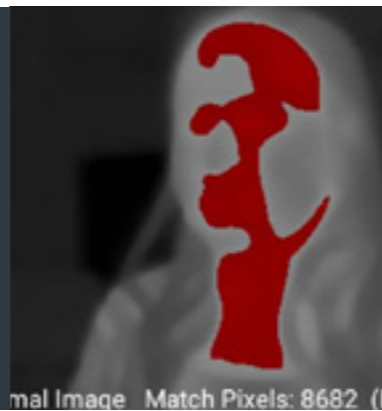

Receive faster zero-contact temperature  
screening, self guided training and digital  
workflow including remote video support.

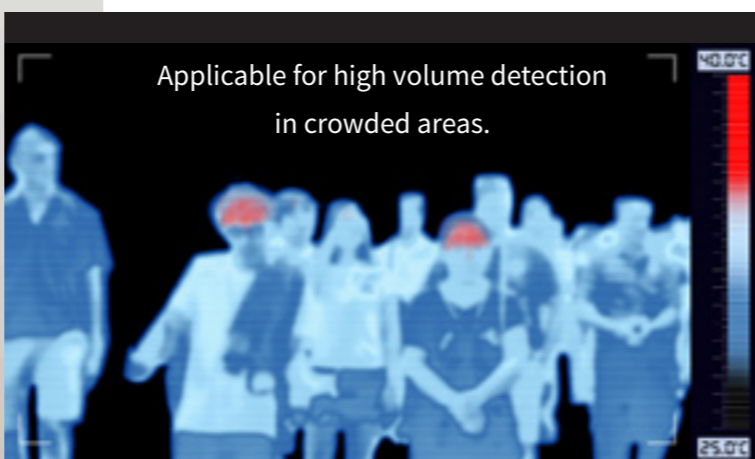

Make quick decisions based on realtime data

FLIR camera sends thermal imaging in real time to the RealWear screen enabling quick detection of potential patients

Applicable for high volume detection in crowded areas.

## Detect COVID 19 Symptoms Fast

Speed is everything when containing an outbreak, particularly in highly populated areas.

We know the Corona Virus creates an acute fever in patients.

Traditional methods of detecting fever takes up to 3 minutes and includes body contact. This may risk injuries or infection spread to patient or practitioner, especially in crowded environments.

Hands-free infrared thermography helps screen for elevated body temperatures which may indicate the presence of a fever, all without requiring the use of the hands. The screener can remain mobile and protected to avoid infected parties entering clean zones by using just his voice.

RealWear's focus is for the medical and first-responder community, and to help keep both affected and non-affected people addressed, and also to assist overall with business continuity.

### In Field Scenario

One doctor or nurse wears the HMT-1, checking the patient's health and condition inside the isolated zone or infected zone, while the other doctors will play as a mentor role in the clean zone.

By doing this, they can check and talk with the patient via RealWear's hands-free system. Of course, this will reduce exposure to cross infection and cut down on the depletion of protective gear and equipment.

WE PROCURE OUTCOMES BY UNDERSTANDING  
YOUR OBJECTIVES AND CONNECTING LEADING  
EDGE TECHNOLOGY, SYSTEMS AND PEOPLE.
